"Locustatachykinin I and II, two novel insect neuropeptides with
homology to peptides of the vertebrate tachykinin family.";
FEBS Lett. 261:397-401 (1390).
-!- FUNCTION: Myoactive peptide. Stimulates the contraction of the
oviduct and foregut.
-!- SUBCLIDIAR LOCATION: Serveted.
-!- SUBCLIDIAR LOCATION: Serveted.
-!- SIMILARITY: SOME SIMILARITY TO TACHYKININS.
PIR; SO8266; ECLQ2M.

T "Peptide toxins from venomous Conus snails.";

L Annu. Rev. Biochem. 57:665-700 (1988).

-!- FUNCTION: Targets vasopressin-oxytocin related receptors.

-!- SUBCELLULAR LOCATION: Secreted.

-!- TISSUE SPECTRICITY: Expressed by the venom duct.

-!- TISSUE SPECTRICITY: Expressed by the venom duct.

-!- SIMILARITY: Belongs to the vasopressin/oxytocin family.

Freund R., Kadenbach B.;
Submitted (MAR-1994) to Swiss-Prot.
Submitted (MAR-1994) to Swiss-Prot.
-!- FUNCTION: This protein is one of the nuclear-coded polypeptide chains of cytochrome c oxidase, the terminal oxidase in mitochondrial electron transport.
-!- CATALYTIC ACTIVITY: 4 ferrocytochrome c + 0(2) = 4 ferricytochrome c + 2 H(2)O.
-!- SIMILARITY: Belongs to the cytochrome c oxidase VIII family.
Oxidoreductase; Mitochondrion.

Novel monomeric monocyclic peptide, used to interfere with angiogenesis, or lymphangiogenesis, is produced by cyclizing a peptide loop fragment from an exposed loop of a growth factor protein by oxidizing the cysteine

Claim 49; Page 32; 102pp; English.

The sequence represents a monomeric monocyclic peptide of the invention, whose 3-dimensional structure is modelled on the expose loop of human VEGPD (vascular endothelial growth factor). The invention relates to a method of producing a monomeric monocyclic peptide by a measuring betabeta carbon separation distances on opposite antiparallel strands of a

residues

```
Characterised by angiogenesis, neovascularisation or lymphangiogenesis. The condition is diabetic retinopathy, psoriasis, archropathy, hemangioma, vascularised malignant or benjus archropathy, hemangioma, vascularised malignant or benjus tractorery cerebrovascular accident, post-angioplasty restenosis, head, heat or cold trauma, substance-induced neovascularisation of the liver, excessive hormone-related angiogenic dysfunction, diabetes induced neovascular sequelae, hypertenaion induced neovascular sequelae, or chronic liver infection. The peptides are also used to medulate vascular permeability in anammal lampa a condition characterised by fluid or brain. The peptides are used to image blood vessels and lymphatic vasculature. The monomeric and bicyclic peptides are used to interfere vasculature. The monomeric and bicyclic peptides are used to interfere vasculature. The monomeric and bicyclic peptides are used to interfere vasculature. The monomeric and bicyclic peptides are used to interfere vasculature. The monomeric and bicyclic peptides are used to interfere vasculature and so used in combination with an anti-inflammatory agent, to treat a
peptide loop fragment from an exposed loop of a growth factor protein and cyclising the peptide by oxidising the cysteine residues. The monocyclic peptides, dimeric bicyclic peptides (comprising 2 linked monocyclic peptides) and a cyclic peptide with a least one amino acid deleted prior to cyclisation are used to interfere with anglogenesis,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     or lymphangiogenesis, is produced by cyclizing a peptide loop fragment from an exposed loop of a growth factor protein by oxidizing the cysteine
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Novel monomeric monocyclic peptide, used to interfere with angiogenesis,

The sequence represents a monomeric monocyclic peptide of the invention, whose 3-dimensional structure is modelled on the expose loop of human vEGPD (vascular endothelial growth factor). The invention relates to a method of producing a monomeric monocyclic peptide by a measuring beta method of producing a monomeric monocyclic peptide by a measuring beta peptide loop fragment from an exposed loop of a growth factor protein and cyclising the peptide by oxidising the cysteine residues. The monocyclic peptides, and a cyclic peptide with at least one amino acid deleted prior to cyclisation are used to interfere with angiogenesis.

Co peptides, and a cyclic peptide with at least one amino acid deleted prior to cyclisation are used to interfere with angiogenesis.

Co characterised by angiogenesis in a mammal with a condition characterised by angiogenesis neovascularisation or lymphangiogenesis.

Co resprovascular accident, post-angioplasty restenosis, head, heat or cerebrovascular accident, post-angioplasty restenosis, head, heat or cold trauma, substance-induced neovascularisation of the liver, excessive hormone-related angiogenic dysfunction, diabetes induced neovascular sequelae, or chronic liver sequelae, hypertension induced neovascular sequelae, or chronic liver infection. The peptides are also used to modulate vascular permeability in a mammal (the mammal has a condition characterised by fluid accumulation in peripheral limbs or in lungs, peritoned cavity, pleura, or brain. The peptides are used to image blood vessels and lymphatic vasculature. The monomeric and bicyclic peptides are used to interfere with at least one biological acciding period are used to interfere with at least one biological acciding atthritis, psoriasis and are also used in combination with an anti-inflammatory agent, to treat a chronic inflammation, especially rheumatoid arthritis, psoriasis and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     1;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             C2 which flank the protease recognition site peptide P are provided to position the two fluorophores within 100
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             1. .3

```
The present sequence is a specific example of a fluorogenic substrate for detecting activity of a protease. The substrate agrees with the generic formula (S1)n-(G1F1)-P-C2(P2)-(S2)k in which a peptide P of 2-8 amino acids comprising a recognition site for the protease is flanked by conformation determining regions (C1 and C2) of 1-3 amino acids. C1 and C2 are labelled by fluorophore groups (F1 and P2, respectively) positioned within 100 angstroms of each other. Additional peptide spacers of 1-50 amino acids (S1 and S2) may also be present (i.e. n and k = 0 or 1). Fluorogenic substrates corresponding to the generic formula are used
                                    /note= "the two conformation determining regions C1 and C2 which flank the protease recognition site peptide P are provided to position the two fluorophores within 100 angstroms of each other"
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        1). Fluorogenic substrates corresponding community of the specimens, esp. in frozen to detect or localise proteases in biological specimens, esp. in frozen tissue sections or to monitor protease activity in stored reagents. Changes in protease activity are associated with e.g. arthritis, emphysema, thrombosis and cancer metastasis. (Updated on 25-MAR-2003 to
                                                                                                                                            /note= "labelled by acceptor fluorophore F2 rhodamine X acetamide"
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Protease activity, fluorphore, detection, fluorogenic, cellular uptake, conformation change.

AAW82023-W82240 are peptides used in the construction of a fluorogenic composition which is used for the detection of protease activity in biological samples. The products can be used for the detection of conformation changes in nucleic acids, oligosaccharides, polysaccharides, proteins, peptides, lipids, phopholipids, glycolipids, glycoproteins, steroids or polymers. In addition, attachment of a hydrophobic group to a molecule can be used to enhance uptake by cells. The composition is composed of P = peptide comprising a protease binding site for the protease, F1, F2 peptides = fluorophores where F1 is attached to the amino terminal amino acid and S1, S2 peptides = when present, are peptide spacers where S1, when present, is attached to the amino terminal acid, and S2, when present, is attached to the amino terminal acid, and S2, when
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             protease; protease indicator; fluorescent signal;
                                                                                                                                                                          orogenic compositions - containing 2 fluorophores separated by a comprising a protease binding site, used for detecting protease
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Fluorogenic substrates for protease determination - having two closely

The present sequence is a specific example of a fluorogenic substrate for detecting activity of a protease. The substrate agrees with the generic formula (S1)n-C1(F1)-FC2(F2)-(S2)k in which a peptide p of 2-8 amino acids comprising a recognition site for the protease is flanked by conformation determining regions (C1 and C2) of 1-3 amino acids. C1 and C2 are labelled by fluorophore groups (F1 and F2, respectively) positioned within 100 angstroms of each other. Additional peptide spacers of 1-50 amino acids (S1 and S2) may also be present (i.e. n and k = 0 or 1). Fluorogenic substrates corresponding to the generic formula are used to detect or localise proteases in biological specimens, esp. in frozen tissue sections or to monitor protease activity in stored reagents. Changes in protease activity are associated with e.g. arthritis, embhysems, thrombosis and cancer metastasis. (Updated on 25-MAR-2003 to
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Protease activity; fluorphore; detection; fluorogenic; cellular uptake;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The present peptide contains a protease binding site. It is used to produce novel reagents whose fluorescence increases in the presence of produce novel reagents whose fluorescence increases in the presence of particular proteases. These fluorescent signal at a visible wavelength when they are digested by a protease. The fluorogenic indicators have the general formula: F1-C1-P-C2-F2 | (G1)n (G2)k where: P is a peptide general formula: F1-C1-P-C2-F2 | (G1)n (G2)k where: P is a peptide containing a protease binding site e.g. ANW46520-53, AAW46550. F1 and F2 are fluorophores. S1 and S2 are peptide spacers e.g. AAW46550. F1 and F2 are fluorophores adjacent to bend into the composition which positions the fluorophores adjacent to each other with a separation of less than 100 Angstrom. When n is 1, S1 is joined to the terminal alpha -amino group of C1 by a peptide bond, and when k is 1, S2 is joined to the terminal carboxy group of C2 by a cativity in a biological sample. The sample is contacted with the indicator and any change in fluorescence is detected, an increase in

                                                                                                                                                                                                                                                                                                                                AAW82023-W82240 are peptides used in the construction of a fluorogenic composition which is used for the detection of protease activity in biological samples. The products can be used for the detection of conformation changes in nucleic acids, oligosaccharides, polysaccharides, proteins, peptides, lipids, phopholipids, glycolipids, glycoproteins, steroids or polywners. In addition, attachment of a hydrophobic group to amolecule can be used to enhance uptake by cells. The composition is composed of P = peptide comprising a protease binding site for the protease, F1, F2 peptides = fluorophores where F1 is attached to the amino terminal amino acid and F2 is attached to the carboxyl terminal amino acid and S1, S2 peptides e when present, are peptide spacers where present, is attached to the amino terminal acid, and S2, when present, is attached to the amino terminal acid, and S2, when
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Protease binding site; protease; protease indicator; fluorescent signal;
                                                                                                                                                                                                                                               New fluorogenic compositions - containing 2 fluorophores separated by a peptide comprising a protease binding site, used for detecting protease

```
The present peptide contains a protease binding site. It is used to produce novel reagents whose fluorescence increases in the presence of produce novel reagents whose fluorescence increases in the presence of produce a high intensity fluorescent signal at a visible wavelength when they are digested by a protease. The fluorogenic indicators have the general formula: F1-C1-P-C2-F2 | (S1)n (S2)k where: P is a peptide containing a protease binding site e Q. AMW46520-53, AAMW4650. F1 and F2 are fluorophores. S1 and S2 are peptide spacers e.g. AAW46550. F1 and F2 are fluorophores sition which postitions the fluorophores adjacent to bend into the composition which postitions the fluorophores adjacent to cach other with a separation of less than 100 Angstrom. When n is 1, S1 is joined to the terminal alpha -amino group of C1 by a peptide bond, and when k is 1, S2 is joined to the terminal carboxy group of C2 by a cachity in a biological sample. The sample is contacted with the activity in a biological sample. The sample is contacted with the indicator and any change in fluorescence is detected, an increase in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ö

Thus invention describes a loyer intractor Computation (relative as induced councils) wherehold describes a loyer intractor computation (the same species muchate acid backbone joining two chromophores of the same species whereby the chromophores form an H-dimer resulting in quenching of the curcles that the chromophore of a change in the absorbance of the chromophore, a decrease in fluorescence or a change in the absorbance of the chromophore, a decrease in fluorescence or a change in absorbance indicates that the indicator is fluorescence or a change in absorbance indicates, that the indicator is classes the protease a mammalian, yeast or insect cell. The composition bears a cluorescence or a change in absorbance indicator is attached to a solid cluorencearboxylic group, bearyloxycarbonyl Marby (Mar), Horomoposition bears a chydrophobic group such as Fact, 9-fluorencearboxylic group, bearyloxycarbonyl Marby (Mar), Trityl (Trt), 4 methoxylic group, bearyloxycarbonyl Marby) (Mar), Mestlylene-2-sulphonyl (Mar), Trityl (Trt), 4 methoxylic group, bearyloxycarbonyl Marby (Mar), Mestlylene-2-sulphonyl (Mar), 4 methoxylic group, bearyloxycarbonyl Marby, 4 methoxylic group, bearyloxycarbonyl Marby, 6 methoxylic group, bearyloxycarbonyl Marby, 6 methoxylic group, bearyloxycarbonyl Marby, 4 methoxylic group, 6 methoxylic group, bearyloxycarbonyl Marby, 6 methoxylic group, 6 minuted adherent cells), a biological sample such as tissue, blood, urine, saliva, lymph, or biopsy cromposition of minuted adherent cells, a procease activity in a minuted activity and a minuted adherent and minuted adherent and an early determination of procease activity, Marbolosic group and are assily detected in biological samp
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Membrane translocating peptide; MTLP; human; intracellular gene delivery; epithelial cell layer; gastrointestinal tract; circulatory system.
                                                                                                                                                                       This invention describes a novel indicator composition (referred as homo-
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         detection of protease activity. ABU60357-ABU60477 represent peptides use to illustrate the method described in the disclosure of the invention
                                     Indicator composition comprising polypeptide or nucleic acid backbone joining two same chromophores resulting in quenching of fluorescence of/change in absorbance of chromophores, useful for detecting protease
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         1; Indels
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 58.9%; Score 33; DB 5; Length 9; 50.0%; Pred.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        /note= "F2, where F2 is an acceptor fluorophore rhodamine X acetamide (R492)"
                                                                                                                                                                                                                                                                                                    used for the detection of protease activity. This can be useful as an indicator of viral infection, cancer metastasis, haemophilia, emphysema, thrombosis and arthritis. The fluorogenic compositions comprise a peptide, a peptide spacer and a donor and an acceptor fluorophore. The peptide is clasved by a protease and the fluorophores can then be detected. The present sequence is one of the peptides described in the exemplification of the invention
                                                                                                                                                  New fluorogenic compositions whose fluorescence level increases in the presence of active proteases, useful for detecting and localizing protease activity in biological samples, particularly in frozen tissue
                                                                                                                                                                                                                                                                                    present invention describes fluorogenic compositions which can be
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Protease, indicator, chromophore, H-dimer, fluorescence, absorbance, nuclease, screening, fluorophore, substrate cleavage.

The invention relates to a novel method for increasing the levels of a protein in a Peyer's patch cell. The method comprises delivering to the cell a nucleic acid coding for a protein, the level of which or its mRNA is greater than in a non-Peyer's patch cell. The preferred protein of the invention is a transcription factor or a protein that activates a transcription factor or a protein that activates of transcription and activator of transcription 3. NK appasaby: T plus communit, S-myc prote-oncogene, myc related, NM2-M2, nucleoside to subunit, S-myc prote-oncogene, myc related, NM2-M2, nucleoside concogene, and p54. The preferred upregulated protein of the invention is selected from clusterin, T-cell surface glycoprotein CFS precursor, HSP concogene, and p54. The preferred upregulated protein of the invention is selected from clusterin, T-cell surface glycoprotein CFS precursor, HSP concogene, and psycholipase A2 precursor and the mRNA is for a protein selected from the group. The method is useful for increasing or decreasing the level of a protein in a Peyer's patch cell, particularly in increasing antigen or vaccine delivery to M cells. The method may also be used to enhance transport of a drug through the gastrointestimal tract concominant in the protein peptide of the form the drug through the gastrointestimal tract form the form the form the form the form the form the form the form the form the form the form the form the form the form the form the form the form the form the form the form the form the form the form the form the form the form the form the form the form the form the form the form the form the form the form the form the form the form the form the form the form the form the form the form the form the form the form the form the form the form the form the form the form the form the form the form the form the form the form the form the form the form the form the form the form the form the form the form the form the form the form the form the form the form the form the form the form the form the

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              셤
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The sequence represents a human membrane translocated peptide (MTLP).

MTLPS and their related fragments, motifs, derivatives and analogues are used for enhancing uptake of a pharmaceutically active agent into a cell, into or out of an intracellular compartment and across a cell layer (for example, an epithelial cell layer lining the gastrointestinal tract).

Example, an epithelial cell layer lining the gastrointestinal tract) of either directly or from a pharmaceutically active agent loaded particle, into the circulatory system of an animal. This method is useful for intracellular gene delivery, as a rapid screening method for the dentification of MTLPs which retain the functional activity of a full-length MTLP, as a cell-based screen for assaying the functional activity of a MTLP and characterising the properties of a MTLP, for diagnosis of a pathological disorder (by administration of a MTLP-active agent complex or MTLP-active particle complex comprising a diagnostic agent) and for correcting a pathological disorder
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                           Compositions for enhancing uptake of e.g. drugs or DNA across a cell membrane, comprise membrane translocating peptides having specific amino acid sequences or a derivative, fragment, motif, analog or peptidomimetic

The invention relates to monitoring 83P2H3 (a calcium transport protein whose gene is located on chromosome 7943) gene products in a biological sample from an apacient who has or is suspected of having cancer cancer) comparing the status of sapells in a trivial sample from an individual and (b) comparing the status to the status of 83P2H3 gene individual and (b) comparing the status to the status of 83P2H3 gene individual and (b) comparing the status to the status of 83P2H3 gene individual and (b) comparing the status to the status of 83P2H3 gene comparing the status to the status of 83P2H3 gene comparing the status to the status of 83P2H3 gene comparing the status to the status of 83P2H3 gene comparing antibodise/immune response against 83P2H3 conjugating antibodise/immune response against 83P2H3 computed from the protein, delivering a cytocoxic agent to a cell carried from the protein comprising an antigen-binding region of the antibody, a recombinant protein comprising an antigen-binding region of the heavy and comprises the recombinant protein, a non-human transgenic animal that produces the recombinant protein, a comprises the recombinant protein, a polymucleotide that encodes the monoclonal antibody and inducing an infinite response to a 83P2H3 antibody, and contracting the copy, and contacting the protein comprises a T cell or B cell, respectively. The method is useful for inhibiting the growth of cancer in a biological sample for monitoring the presence of cancer in an individual. The modulator is cancer that expresses 83P2H3. The immune response against 83P2H3 and for detecting the presence of 83P2H3-related protein or polymucleotide in a biological sample from a patient who has or who is suspected of having cancer man the hold is useful for monitoring 83P2H3 monological methodological methodologica and treatment, to detect and quantify 83P3H3 and mutant sequence of 83P2H3-related protein. The present sequence of 83P2H3-related protein, for purifying a 83P2H3-related protein. The present sequence of 83
                                                  Monitoring 83P2H3 gene products for monitoring the presence of cancer in a subject, comprises determining the status of 83P2H3 gene products in a tissue sample from the subject and comparing it to a normal sample.
                                                                                                                                                              Example 11; Page 173; 270pp; English.

```
Companie from a patient who has or is suspected or having cancer (especially prostate cancer), comprises: (a) determining the status of 83P2H3 gene products expressed by cells in a tissue sample from an individual and (b) companie, his of included are modulators of 83P2H3 gene individual and (b) companie, his of included are modulators of 83P2H3 gene products in a normal sample. Also included are modulators of 83P2H3 gene products in a normal sample. Also included are modulators of 83P2H3 gene function or status, generating antibodise/immune response against 83P2H3 (or related protein Cafrefall whose generating actoroxic agent to a cell expressing 83P2H3 by conjugating the agent to an anti-83P2H3 antibody, a non-human transgenic animal that produces the recombinant protein, a single-chain of the anti-83P2H3 antibody, a some non-human transgenic animal that produces the recombinant protein, a single-chain of the anti-83P2H3 antibody, a some of 11ght chains of the anti-83P2H3 antibody, a vector comprising an immune response to a 83P2H3 protein, by providing a 83P2H3 antibody and inducing an immune response to a 83P2H3 protein, by providing a 83P2H3 and contacting the presence of cancer in an individual. The modulator is useful for inhibiting the growth of cancer cells that expresse 83P2H3, for treating an immune response against 83P2H3, and for detecting the treating anner and the vector is useful for reating a patient with a treating anner and the vector is useful for reating a patient with a treating anner and the vector is useful for reating a patient with a treatment, to detect and guantify 83P2H3 and muteant cancer that expresses 83P2H3. The immunological methodologies and treatment, to or polymucleotide in a biological cancer diagnosis, prognosis, imaging antibody is useful in prostate cancer diagnosis, prognosis, imaging an Hisbody is useful in prostate cancer diagnosis, prognosis, imaging all antibody is useful in prostate cancer diagnosis, prognosis, imaging elabering sequence of cancer diagnosis, progno
                                                                                                                                                                                                                                                                                                                                                Monitoring 83P2H3 gene products for monitoring the presence of cancer in a subject, comprises determining the status of 83P2H3 gene products in a tissue sample from the subject and comparing it to a normal sample.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The invention relates to monitoring 83P2H3 (a calcium transport protein whose gene is located on chromosome 7q34) gene products in a biological sample from a patient who has or is suspected of having cancer

WPI; 2002-269179/31.

Monitoring 83P2H3 gene products for monitoring the presence of cancer in a subject, comprises determining the status of 83P2H3 gene products in a tissue sample from the subject and comparing it to a normal sample.

Example 11; Page 191; 270pp; English.

The invention relates to monitoring 83P2H3 (a calcium transport protein whose gene is located on chromosome 7934) gene products in a biological sample from a patient who has or is uspected of having cancer (sepecially prostate cancer). Comprises: (a) determining the status of (sepecially prostate cancer). Comprises: (a) determining the status of 3P2H3 gene products expressed by cells in a tissue sample from an individual and (b) comparing the status to the status of 83P2H3 gene cornal sample. Also included are modulators of 83P2H3 gene cornal sample. Also included are modulators of 83P2H3 gene cornal sample. Also included are modulators of 83P2H3 gene produces the status of 102424.1) using identified HLA (human leukocyte antigen) binding peptides derived from the protein, delivering a cytotoxic agent to a cell actived from the protein comprising an antigen-binding ragion of the antibody. The combinant protein comprising an antigen-binding ragion of the antibody. The comprises the recombinant protein, a non-human transgenic animal that produces the recombinant protein, a non-human transgenic animal that produces the recombinant protein, a non-human transgenic animal that produces the recombinant protein, a non-human transgenic animal that produces the recombinant protein, a non-human transgenic animal that produces the recombinant protein, a coll or polynucleotide that encodes the monoclonal antibody and inducing an immune response to a 33P2H3 antibody, a vector comprising a polynucleotide that encodes the monoclonal antibody and inducing an concert that expresses a T cell or B cell, respectively. The method concert that expresses 83P2H3 gene produces in a biological sample for monitoring 83P2H3 gene produces in a biological sample for monitoring the growth of cancer cells that express 83P2H3. For treating a nimmune response against 83P2H3, and for detecting the presence of 83P2H3-related protein or polynucleoside in a biological and treatment, to detect and quantify 83P3H3 method sample from a patient who has o

Sequence 142, Application US/08802981
Patent No. 6037137
GENERAL INFORMATION:
APPLICANT: Remoriya, Akira
APPLICANT: Remoriya, Akira
APPLICANT: Packard, Beverly S.
TITLE OF INVENTION: Compositions for the Detection of Enzyme
TITLE OF INVENTION: Activity in Biological Samples and Methods of Use Thereof
FORRESPONDENCE: 231
CORRESPONDENCE ADDRESS:
ADDRESSE: Townsend and Townsend and Crew LLP
STREET: Two Embarcadero Center, Eighth Floor
CITY: San Francisco
STREET: California
COUNTRY: USA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          .

-! FUNCTION: Targets Sorgessin-oxytocin related receptors.

-! FUNCTION: Targets Species of the venom duct.

-! SINLIARITY: Expressed by the venom duct.

-! SINLIARITY: Eslongs to the vasopressin/oxytocin family.
